

Radoslav Bechev

Infrastructure & Linux Systems · HBO-ICT student at Fontys

Heerlen, Netherlands | shinni@tutamail.com | shinni.dev | github.com/ShinniUwU

Profile

First-year HBO-ICT & Infrastructure student at Fontys with several years of self-taught Linux and virtualization experience. I design, run and debug a production-style Proxmox cluster serving around a dozen services, with automatic TLS, a mesh VPN for administration, a default-deny firewall and scheduled backups. Seeking infrastructure, DevOps or IT operations work alongside my studies.

Education

HBO-ICT & Infrastructure, Fontys University of Applied Sciences Sept 2026 – Aug 2030
Eindhoven, Netherlands · **Currently enrolled, first semester**

- Four-year bachelor's programme in systems administration, networking, cloud infrastructure and security. Available for internship placement from year two onward.

Hardware and Software Science, Vanq Voinova 132 SU 2019 – 2024
Sofia, Bulgaria · Final GPA 5.43 / 6.00

Technical Skills

Operating systems	Linux (Debian, Arch), Proxmox VE, Windows
Virtualization	Proxmox VE, LXC, KVM, Docker and Docker Compose, GPU passthrough
Networking	OpenWrt routing and firewalling, subnet segmentation, port forwarding and NAT, Tailscale mesh VPN, DNS filtering, QoS shaping, default-deny firewall policy, key-only SSH, fail2ban
Web & TLS	Caddy reverse proxy with automatic certificate renewal, Cloudflare DNS and dynamic DNS; some experience with Cloudflare Tunnels
Automation	Bash, systemd units and timers, cron, scheduled backups with retention policies
Tooling	Git, CI pipelines, JavaScript / Node.js

Infrastructure Project

Self-hosted homelab, Proxmox VE cluster Ongoing

- Design and maintain a Proxmox VE host running roughly a dozen LXC containers and VMs: password management, file sync and collaborative office editing, media streaming, small web services and dedicated game servers.
- Front all public services with a Caddy reverse proxy handling automatic TLS renewal, backed by a dynamic DNS updater that keeps records accurate on a connection with a changing public IP.
- Administer the host over a Tailscale mesh network with an integrated identity provider, hardened with a default-deny firewall, key-only SSH and fail2ban.
- Configure an OpenWrt router end to end: firewall and forwarding rules, network-wide DNS filtering, and CAKE queue shaping on a 5G uplink. Run scheduled backup jobs with per-container retention policies.
- Diagnosed a broken Docker iptables chain leaving published container ports silently unreachable despite healthy containers; pinned the host kernel branch to keep GPU DKMS modules building across upgrades.

Experience

Customer Support Representative, Alorica Aug 2025 – Jun 2026
Sofia, Bulgaria · On-site

- Resolved flight booking issues for a major airline client on a high-volume line, working daily in a terminal-based reservation system to look up, modify and rebook reservations.
- Diagnosed problems under time pressure and explained technical constraints in plain language to non-technical customers, documenting each case accurately.

Volunteer Software Engineer, LunarLabs Nov 2024 – Present
Remote

- Contribute to internal infrastructure and CI setup for a small distributed team, maintaining build pipelines and deployment tooling used across the group.

Certificates & Languages

JS Back-End (2025) · JS Applications (2025) · JS Advanced (2024) · Programming Fundamentals (2024)

Languages: Bulgarian (native) · English (fluent)
